

Surfacing Repair Instructions

Wetpour and Rubber Mulch Repair

A Wearing Course Wetpour Repair Kit contains enough material to carry out a 1m² repair at 20mm thickness.

If a Complete Wetpour Repair Kit has been purchased then 1m² of base rubber is also included, giving a total thickness of 40mm.

A Rubber Mulch Repair Kit contains enough material to carry out a 1m² repair at 40mm thickness.

Tools Required

- Steel Float
- Stanley Knife (to trim hole)
- Rubber Gloves (supplied)
- Bucket containing soapy water
- Wheelbarrow/ Tub for mixing

Material Mix Ratios

Wetpour

Base rubber 12.5kg of rubber to 1kg resin

Top rubber 12.5kg of rubber to 2.5kg resin

Rubber Mulch

Rubber mulch 10kg of rubber to 2kg binder

Kits are already pre-measured

Step 1

Trim the sides of the hole to form a neat square edge.

Step 2

Remove damaged area and any loose material, then leave to dry.

Step 3

We recommend you apply primer to the edges to aid bonding. This is not included in the kit but can be purchased separately.

Step 4

Mix rubber granules and binder to the suggested ratio (see page 1).

Step 5

Place mixed material into the hole.

Step 6

Overfill to allow for compaction.

Step 7

Lubricate the steel float with soapy water and use to level and compact the material into the repair.

Step 8

Clear away excess material.

Step 9

Leave to cure.
