A small area requirement and an ascent via a rope ladder

In the Basic series, you will find play systems in many different varieties. Birk is one of the smallest play towers. It has a floor height of 90 cm and consists of a slide which is accessed via a rope ladder. Do you want the same model, but with stairs instead? Then have a look at our **LB105 Bard** play tower.

The rope ladder leads the children to the floor of the play tower, from where they can enjoy the view of the rest of the playground before gathering up the courage for a trip down the slide. The rope ladder both challenges and develops the balance and the motor skills, which is important for children to master. Using their balance exercises the cerebellum, and this is something we use unconsciously every day, for example when going up the stairs or lifting things. The Birk play tower is recommended for children from the age of three.

High quality at a low price

For all of our models in the Basic series, we have focused on creating compressed towers with a minimal area requirement, thus giving you a competitively priced play system, where you will also save money on the safety surface, as this is also minimised. Additionally the prices have been kept low by optimising the amount of material being used and reducing movable parts. This does not mean that we have compromised on our high quality. All of our playground equipment is created with the same care from idea to production, just like it is all made from the same material, which is low in maintenance and reusable.
